

ABSTRACT:

This apparatus comprises a housing (1) in which a place (12) is provided for a screen formed by a display unit (15) which comprises, inter alia, an assembly of a plate of optical fibers (30) disposed on the side of the front face, facing the user (28) and a display unit (29) comprising a multiplicity of pixels.

Thanks to the plate (30) it is possible to obtain various screen configurations (by enlarging the information produced by the unit (29) or obtaining a curved screen which has very good visibility). Applications: Mobile radiotelephones, watches.
